

MOBILE VOICE & DATA v NETWORK SERVICES 3

About Mobile Voice & Data

This is a brand new framework which originated as one Lot within Network Services! The government pledged greater spend on mobile data services.

Mobile Voice & Data incorporates hardware and services that support the wider public sector to access UK airtime and calls, SMS and data, international calling and data, device hardware, device management, and also associated services such as security - it's quite a big scope and no wonder CCS brought it out as its own framework!

About Network Services 3

Network Services 3 is the 3rd iteration of the Network Services framework. It allows UK Public Sector Buyers to buy a wide range of telecommunications related solutions, including cloud services, audio and video conferencing, radio and satellite networking. The expected scope includes WAN, LAN, telephony services, video and audio conferencing, integrated comms and a lot more. The 2nd iteration is currently Live. Network Services 3 will be opening for applications in October 2022 ready to replace it.
